

Chinese Lesson Deck

User Guide — a pocket study app for the Batch 01 华语 vocabulary, in Chinese with Thai, English, and Japanese.

Version 2.0.0 · 105 words · 6 lessons · profiles & growth · June 2026

1 Getting started

On a phone (recommended)

- Open the app's web address in your mobile browser (Safari on iPhone, Chrome on Android).
- Add to home screen for a full-screen, app-like experience: **iPhone** — Share → Add to Home Screen; **Android** — ⋮ menu → Add to Home screen.
- On first launch, **create a profile**: type a name and choose a companion (dragon, phoenix, or warrior).

On a computer

Open the web address or double-click the file. You can also use the ← → arrow keys to move between cards and **spacebar** to flip.

2 Profiles

Each learner gets their own profile, so several people can share the app and keep separate progress and growth.

- Your current profile shows in the **top-right**; tap it to open the **Me** tab.
- In **Me**, **switch** profiles or tap **+ New profile** to add one.
- Words seen, difficulty tags, quiz history, XP, streak, and chosen mascot are all saved **per profile**.

Please note: profiles are not password-protected and live only in this browser on this device. They don't sync to other devices, and anyone using the device can open any profile — the trade-off for a free app with no server. A real account system with cross-device sync can be added later.

3 The four tabs

📖 Study — swipe-through flashcards

- The Chinese word is always on the front. **Tap to flip** and see the meanings.
- **Swipe left or right** to move freely between cards, backward and forward. Also: the < > **arrows** above the card, or keyboard arrows.
- The **"Show" row** has checkboxes for **Pinyin** / 拼音 / **EN** / 日本語; tick what appears on the back. The 日本語 line is marked **AI** (machine-generated).
- **Difficulty tags (optional)**: **Hard** **Medium** **Easy** mark a word for your own reference and stats. They do **not** move the card. Tap the active tag again to clear.
- **Lesson chips** study All or just Lesson 1–6. The 🗣 button speaks the Chinese.

📝 Quiz — test yourself

- A 10-question mix of multiple choice and the original fill-in-the-blank questions.
- A 中→ไทย / ไทย→中 toggle sets the recall direction.
- **Skip — do this one later** moves a question to the end; skipping never hurts your accuracy.

🔍 Browse — look up any word

- Searchable list (matches 汉字, Pinyin, Thai, English); tap a row to hear it.
- A colored dot shows your difficulty tag; an **L1-L6** marker shows the lesson.

👤 Me — your growth

Your mascot, stage, XP, streak, stats, and profile management — see section 4.

4 Growth & XP

Your companion grows as you study, making progress visible and motivating.

XP source	Reward
View a new word (first time)	+2 XP
Quiz answer	+5 if correct, +1 if not
Daily-return bonus (first open each day)	+10 XP and builds your 🐾 streak

Stage thresholds (total XP): Hatchling 40 · Young 120 · Grown 280 · Legendary 560. Crossing a threshold triggers an evolution celebration. You can change your companion anytime — it re-skins and keeps your XP. Reset a profile via **Reset this profile's progress** in Me.

5 Controls quick reference

Action	How
Next / previous card	Swipe left / right, tap < >, or ← → keys
Flip a card	Tap it (or spacebar)
Choose languages on the back	"Show" checkboxes above the card
Tag a word's difficulty	Hard / Medium / Easy under the card (optional)
Hear the Chinese	🔊 on cards and Browse rows
Skip a quiz question	"Skip — do this one later"
Switch / add profile	Me tab, or the name in the top-right

6 Good to know

- **Offline:** after first load, the app runs without internet (fonts and the speech voice benefit from a connection).
- **Privacy:** nothing is uploaded; all profiles and progress stay in the browser's local storage.
- **Japanese is AI-generated** and marked with an  badge — a helpful aid, not verified course content. Thai and English come from your curated source.
- **Content source:** Batch 01 — 105 words (39 with examples) and 5 fill-in-the-blank questions across 6 lessons. The app is built to absorb more lesson files.

One self-contained file — easy to update as new lesson batches are added.
